

Cylinder Beach foreshore

Cylinder Beach Reserve is a popular recreational destination that attracts tens of thousands of local, national and international visitors each year.

The beach has been voted Queensland's best for the past two years, adding to the precinct's popularity.

Redland City Council manages the majority of the Cylinder Beach foreshore, which involves ongoing operational activities such as management of vegetation, car park, toilet, park infrastructure and the beach access.

Minjerribah Camping, an innovative private enterprise of the Quandamooka People of North Stradbroke Island (Minjerribah), manage the Cylinder Beach camping area.

Council recognises that highly popular areas, while providing for great tourism experiences, also present some challenges.

At Cylinder Beach, Council:

- undertakes vegetation and erosion management;
- maintains and repairs the car park;
- has conducted geotechnical and water catchment studies;
- carries out monthly water quality testing of the lagoon area;
- conducts general maintenance and management of the foreshore.

Council is also developing greater partnerships with the State Government, Minjerribah Camping, Quandamooka Yoolooburabee Aboriginal Corporation (QYAC), community organisations and residents to ensure Cylinder Beach, one of Redlands Coast's most naturally wonderful assets, is well managed now and into the future.

Snapper Street pedestrian link

The Snapper Street pedestrian link has been proposed as part of the Point Lookout Coastal Walk concept plan.

Previous consultation on the pedestrian link was undertaken with Quandamooka Yoolooburabee Aboriginal Corporation (QYAC) and community organisations as part of the Coastal Walk concept plan and more recently at an onsite walk and market stall.

The project is currently in the pre-design phase, with the next steps being engineering and wayfinding/cultural design.

QYAC will be engaged for the wayfinding/cultural design work.

Once the detailed concept and detailed design is finalised, State Government, Council and grant funding options can be considered.

Council hopes to accelerate delivery of the Snapper Street key link with a partnership approach involving the State Government, Council, QYAC and the community; and has previously lobbied the State for funding under the North Stradbroke Island Economic Transition Strategy (ETS).

The multi-million dollar project is consistent with the State Government's ETS (Action 16 – develop and improve recreational trails on the island).
