Technical Note: LGIP Action Transport Network Project Review

September 2022

Introduction

Civil and Traffic team undertook a high level review of the current items listed in the Local Government Infrastructure Plan (LGIP) published in 2018 to inform the 2022 LGIP revision. From this review a number of modifications have been recommended including removing projects no longer required and inclusion of new key projects.

Project Costing

Active transport infrastructure projects were given price values based on standard unit rates. These unit rates were derived from recently delivered active pathway projects. For the purposes of pricing, these active pathway projects were broken into two main groups. Standard 2.5m pathway infrastructure in new urban environments and major 3m wide active transport connectors requiring additional threshold treatments and boardwalks.

Standard 2.5m pathways were priced at \$625/m in length and 3m major connectors were priced at \$850/m in length.

Retained Projects

The following project from the previous LGIP are to be retained in the review.
